

CAR ANGEL

The Car Angel™ is a solar powered standalone **smart device that transmits alerts** to selected people & Emergency Medical Services (EMS).

[learn more →](#)

The Event

The Car Angel will respond automatically in the event of the user being involved in an impact/collision.

Impact Sensor

In the event of an impact, an SMS and/or email is sent to the user's designated "Angels" and Emergency Medical Services (EMS), with the user's GPS location and contact details.

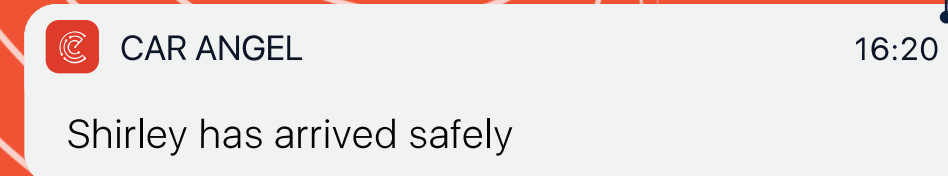

Real Time Alerts

Tap alerts are sent out via SMS by double tapping the device.

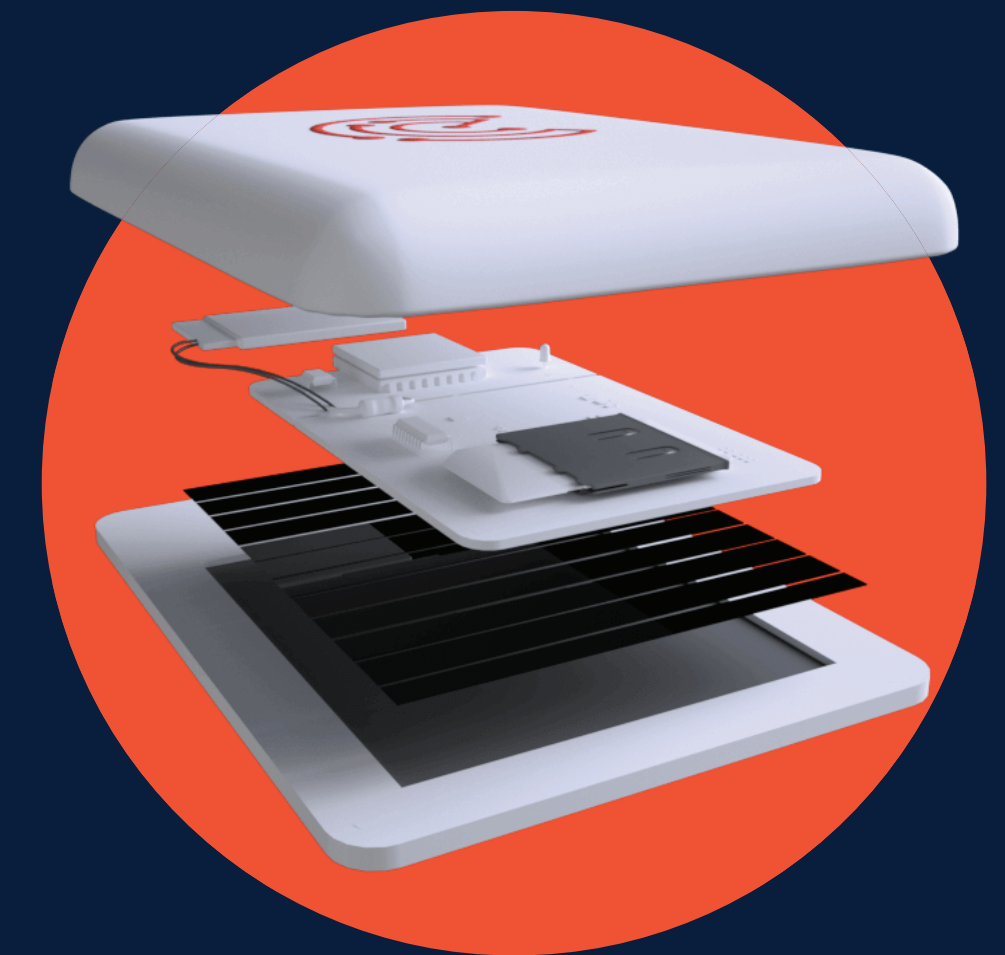

The Alert

The Car Angel will send impact alerts via SMS or email with Google Maps location links to the user's pre-selected "Angels" of choice and Emergency Medical Services (EMS).

The Response

The Car Angel ensures total peace of mind knowing that help is on the way.

Features:

- Patented Impact Sensor
- Solar-powered
- Standalone Device
- GSM/GPS Enabled
- Light Weight
- Easily installed

The cool stuff:

Tap alerts can be sent to the user's designated non-medical emergency "Angel" group by double tapping the device. These alerts may be used for functions like:

- I need assistance
- I am here
- I have broken down
- Please contact me, etc.

How does it work?

In the event of an impact, a G-Force/Impact sensor will be triggered, waking up the device. The device will then calculate its GPS co-ordinates and send the relevant data through to our Angel server stack.

The server will then immediately send through the relevant SMS's/emails to the user's designated Angels of choice with the user's exact location and contact details.

Additional functionality can be activated from the server stack upon request.

The **Car Angel offers an immense sense of security and convenience** provided through a cost-effective standalone device, embracing technology of the future. – Powered by Authentek
